

Benefits of storing patient information in the cloud

Safe, easy access

Fast & easy access to important medical information is vital to diagnosis, treatment & ongoing care. Uploading health records, patient history, test results, images & other diagnostic findings into the cloud means that you can always act on the latest information.

Better control

Cloud technology makes it easier to provide access to patient information to the right levels of user authority. For example, specific parts of a patient's financial data, like their billing history, may not be available to frontline care providers. Likewise, details of medical conditions & treatment can be blocked from back-office staff who don't need those details to do their work.

A single solution

Cloud-based technologies make it easier to share information & therefore improves integration capabilities. For example, cloud technology makes it possible for your patient data stored in your practice management solution to integrate with practice data stored in your electronic medical record, ensuring you have the most up-to-date patient information across your practice.

Reliability

Cloud services mean that you don't have to worry about backing up data & in the event of hardware failure/theft, power outages or data breaches, you can quickly & easily restore data from the cloud with minimal disruption to patient care.

Save on costs

Cloud-based technologies negate the need to purchase new hardware, have a dedicated server room, or employ on-site skilled IT staff. Software updates, backups, & other maintenance are deployed remotely at a lower cost than what could be done in-house.

Safety & security

Your service provider is responsible for ensuring that all the latest data security protocols are in place. **Ensure your cloud-based digital health technology provider is POPI compliant** & can safeguard against your sensitive patient & practice data from being accessed or shared without permission.

Save space

Storing paper files isn't only inefficient, it takes up physical space. Space that could be used to either reduce overheads or add to the health services available at your practice.

Healthbridge is committed to the success of your practice. We provide an extensive range of **cloud-based clinical & billing solutions to over 5,000 medical professionals nationwide.** To find out how we can help with your patient data, click [here](#).
